## ENIGHMA Quality & Evolution

The Enigma Chest protector G.50 gives a new pulse to the concept of "accessory". It is an item studied and projected for the archer's real comfort whatever its technical level is. The renewed production of Enigma today allows the archers of both sexes, who wear it, a level of comfort that at the moment is unattainable from the other similar products on trade.

The new Enigma Chest protector is produced with high and unbelievable light material, that is weighs less than 50 grams. This has been possible thanks to researches on the materials and to accurate studies made together with the athletes and with the professionals of the sportswear.
