

CYBOW RISER  
CYBOW LIMBS

## Cybow LIMBS

The Pleasure of Cybernated Bow

**Wonder Full**  
 Fantastic combination of all strong point of advanced Recurve limb technology with speed and accuracy and consistency. Characteristics of compound bow. Smoothness and shooting accuracy of traditional bow.

**Trust Full**  
 Now, fibercarbon is general trends in limb materials. But some archers still prefer classic woodcarbon limb characteristics. For keeping smooth shooting feeling, we remained this structural layer.

**Faith Full**  
 About 157 years ago, there were forty miners in America. Now there are still gold-miners looking for gold medal of the podium. Let their dream come true!

**Power Full**  
 Even though these limbs are developed for intermediate level archers, all Cybow limbs have same characteristics of limb dynamics in its structure. It means you are going to medium level theater for watching high level movie.

**Joy Full**  
 Even though the category is for the beginner archers, its quality and durability is not for the low level satisfaction. Except Olympic medals, the archers can achieve anything they want with Joy Full.

**Tarzan**  
 In the beginning, there was Black Enthusiasm. Harmonized with almost all existing beginner handles.
