# SOLOTRAK - SP SERIES

Between two points in one plane is created a straight line, the fundamental principle of design for the Solotrak pins. Without angling pins or using multiple rows of pins the Solotrak's single row of overlapping snag proof rigid steel pins provides a perfectly straight row of aligned aim pins.

The famous Metal Optic Pin has been re-engineered to a single row to achieve a zero pin gap for arrow speeds beyond 360 feet per second, with the additional size of the finer .010 pin diameter. This new Solotrak configuration allows for multiple diameter sizes and the ability to add or remove any pin and color with ease. For example, at close range a .029 is the largest and easy to see, for long range a .010 can be added as a last pin to cover less of the target. Solotrak pins are numbered 1 thru 5 with the diameter embossed into the pin.

Pin #1 thru #5

.010 Diameter  
.019 Diameter

Mounted near the riser this compact unit sports a stout look with 3/8-24 drilled and tapped hole located in the extension bar for concealed light, a tough reinforced composite guard with bubble level for accuracy.

**\$59.99**

**SP319**

Solotrak features .010 pin diameter availability.

Available  
in  
Lost or  
Real Tree  
Camo

**\$89.99**

**SP319DT**

Solotrak sight with dovetail extension.

# SOLOPRO - ST SERIES

Along with the Solotrak pins described in the previous page, the ST Series' sights have been designed with an integrated pinguard machined entirely of 6061 aircraft aluminum. For improved accuracy the 1st and 3rd axis leveling adjustments are engineered into the unit and preset to the extension bar at the factory!

A steel carrier rotates around a pin pivot for third axis.

The one piece aluminum head rotates around the flat head screw as a pivot point for leveling in the first axis.

**\$89.99**  
**ST310**

All New Solotrak ST Series offers multi-axis leveling and fiber optic pins.

# SOLOMICRO - MA SERIES MICRO ADJUST

Tool-less gang adjust with ball click registry are added to this Solotrak sight to make it the fixed pin sight that does it all. The patented locking mechanism clamps onto the threaded rod as well as the dovetail nest giving this model twice the locking power as anything on the market without the use of tools for gang adjustments. This is Toxonics' proven tournament technology brought to the bowhunter.

Available in Lost  
or Real Tree  
Camo

MA 310 3 Pin  
MA 510 5 Pin

**\$189.99**

**MA310**

All New Micro Adjust offers Solotrak features plus tournament shooting proven technology.

# KeySlide

## Adjustable Range

As the speed of today's bows has increased, many archers are opting for fewer pins. The ultimate choice is to shoot a single pin with a quick setting range of yardage choices. The engineers at Toxonics have created a gear driven, single pin sight called the KeySlide.

A key driven Delran slide block gives the ProSlide a smooth feel throughout two inches of pure travel. A unique gang adjust feature on the front of the sight makes all two inches of travel useful and available to the archer for yardage marks. A gear driven adjustment arm lends a consistent and direct adjustment feel to the sight when small or large adjustments are made.

**For Details**

The NailDriver has a 10-click knob for computer generated sight tape compatibility; it's proven to be the toughest, most reliable target sight available on the market to date.

This particular model is completely hand machined and match milled to perfection with the Toxonics patented locking mechanism.

Depress the lock knob for rapid movements; a single block and lead screw for twice the locking power and repeatability as others sights on the market.

MSRP

**\$189<sup>99</sup>**

The patented Toxonics locking system in this sight uniquely locks the lead screw and sight block with the simple twist of a knob. With twice the locking power as the rest, it is the sight of choice for those who shoot lot of arrows. Both windage and yard-age area a 32-pitch 10-click adjustment for computer generated sight tapes. For a quick adjustment, loosen the knob about 3 turns and push in on the knob. This will allow you to move the entire sight block up or down quickly.
